

## Formulary Benefits Data Consent Form

Formulary Benefits Data is maintained for health insurance providers by organizations known as Pharmacy Benefits Managers (PBM). PBM'S are third party administrators of prescription drug programs whose primary responsibility is processing and paying prescription drug claims. They are developed and maintained formularies, which are lists of dispensable drugs covered by a particular drug benefit plan.

By signing below, I give permission to AMG, A Professional Medical Corporation (DBA: Astrana Care) to access my pharmacy benefits data electronically through RxHub. This consent will enable AMG, A Professional Medical Corporation (DBA: Astrana Care) to:

- Determine the pharmacy benefits and drug copays for a patient's health plan
- Check whether a prescribed medication is covered (in formulary) under a patient's plan
- Display therapeutic alternatives with preference rank (if available) within drug class for nonformulary medications
- Determine if a patient's health plan allows electronic prescribing to Mail Order Pharmacies, and if so, E-prescribe to these pharmacies
- Download a historic list of all medications prescribed for a patient by any provider

In summary, we ask your permission to obtain formulary information and information about other prescriptions prescribed by other providers using RxHub.
